WORK EXPERIENCE

LOCATION PREDICTION MODEL BASED ON URBAN INDIVIDUAL MOBILITY DATA

SHANGHAI

Undergraduate Thesis

Sept 2023 – May 2024

- Developed a context-aware location prediction model integrating Transformer networks, LDA for environmental context, and Graph Convolutional Networks for location embedding, enhanced by a dual attention encoder-decoder architecture to improve prediction accuracy. Preprocessed and analyzed urban trajectory and POI data to evaluate the model's performance, demonstrating improvements over existing methods, with model design validated through sensitivity and ablation studies.

GRAPHICAL INTERFACE TO SOCIAL NETWORKS

SHANGHAI

Data structures course design

Oct 2021 – Jan 2022

- Designed an algorithm to identify potential social network connections based on mutual friends and group affiliations, and developed a graphical interface to visualize personal networks. Implemented features to discover and rank potential new connections according to mutual friend count and relevance.
